CO_2 Dispenser

by IPS Controllers

The Ultimate pH Control Solution

Precision pH Management for Pools, Spas, and Water Systems.

Upgrade your water care routine with our **CO_2 Dispenser,** IPS-CO2, engineered for seamless pH control in pools, spas, or any body of water. Designed to integrate effortlessly with any chemical automation controller, this system offers commercial-grade durability while remaining cost-effective.

Key features:

- **Universal Compatibility:** Works with any chemical automation controller (110 VAC).
- **Built for Longevity:** Constructed with commercial-grade materials to ensure extended durability.
- **Easy Installation:** Comes with mounting brackets and straightforward setup instructions.

Why Choose CO_2 for pH Control:

- **Chemical-Free:** No harsh chemicals involved.
- **No Fumes:** Safe for indoor and outdoor use.
- **Alkalinity-Friendly:** CO_2 increases alkalinity gradually over time, making it a gentler option than muriatic acid, which can rapidly lower alkalinity—especially in commercial spas. For optimal balance, some users pair the CO_2 dispenser with an acid pump to maintain stable alkalinity levels.
